

FPPi Swivel Davit Anchors

Swivel Davit Anchors (SDA) are designed to provide overhead fall protection anchorage in areas where they must be moved out of the way for bridge cranes or other process related issues. FPPi's SDA's can be free standing or attached to your columns.

Available as single points or can be paired for use with rigid rail to provide full coverage over an entire linear work zone.

- Engineered per OSHA and ANSI specification
- Capacities up to 2 persons - MAF=900lbs/person
- Spans to 30 Feet
- Outward reach to 7' - Longer available as custom design

- Used in facilities where workers need protection under overhead cranes
- Provides worker with a fixed path or rigid track fall protection
- Easy to fold away providing fall protection that will not interfere with an existing overhead crane
- Can lock in multiple positions for operation or storage

FPPi Services

- Consulting
- Plant Evaluation
- Facilities Evaluation
- Fall Protection Program Development
- Anchor Point Design
- Certification of Existing Anchor Points
- Fall Protection Training
- Rescue Plan Development
- Wind Turbine Fall Assessment Studies
- Safety Plan Development
- Hazard Identifications

Fall Protection Training
